This document presents the prevalence of anemia, underweight and stunting among children, adolescent and women for 342 Districts (17 States and 5 Union Territories) of India from the fourth (2015-16) and fifth (2019-20) National Family Health Survey (NFHS) and percentage point changes between the two surveys through **maps** and **heat-map tables**.

TECHNICAL NOTES

The fifth NFHS (2019-20; noted as 2019 in the Table) factsheet does not provide equivalent data for the fourth NFHS (2015-16; noted as 2016 in the Table) for 79 districts where boundary change occurred. For these districts, we referred to the NFHS-4 district factsheet to calculate the prevalence rate based on the following methodology:

- If a district was created from only one district, we assumed the 2016 prevalence rate for both. For example, Palghar was created from Thane, Maharashtra, and Palghar was not available as a separate district in NFHS-4. We made the reasonable assumption that the NFHS-4 prevalence for the combined Thane was the same as the prevalence of Palghar and Thane.
- If a district was created from multiple districts, we considered the mean of the prevalence rate from all the districts from which the new district was created. For example, Botad was created partially from Ahmadabad and partially from Bhavnagar, Gujarat. We assume the prevalence rate of the Botad in 2016 as the mean of the prevalence of Bhavnagar and Ahmadabad in NFHS-4.
- If a district was available in the NFHS-4 survey, but experienced a change due to the creation of a new district, we retained the NFHS-4 prevalence for 2016. For example, Thane, Ahmadabad and Bhavnagar would have the same prevalence rate as listed in the NFHS-4 factsheet.

The colors in the exhibits show a gradient of blue (for varying levels of improvement as per the POSHAN Abhiyaan targets, i.e., a decline in their percentage prevalence) and gradients of red for reversal (i.e., an increase in their percentage prevalence).
